

## **What is Transburn?**

Transburn is a deflationary cryptocurrency token built on Ethereum blockchain with real use case. It is a fuel for DApps games and other utilities connected with DApps. For every onchain transaction, 1% of each transaction is automatically burned. This self-destructive functionality increases the assets scarcity over the time.

## **Problem Statement**

DApps were created to transform smartphones into a light client node within the Ethereum network. It enables people to access Ethereum's entire ecosystem from virtually anywhere, by utilizing a messenger system where users can pay each other. That said, the technology is quickly expanding, and DApps may soon revolutionize the gaming industry. The current gaming payment systems are slow for consumers who want to exchange their currency for in-game items. With DApps, developers can make a payment framework like Transburn in order to make cryptocurrency exchanges in the game easier. In addition, DApps allow game developers to publish titles that accept digital funds for in-game items in a decentralized marketplace instead of a centralized store like Google Play. This way, they will be able to increase their market size more swiftly.

## **Opportunities**

- We want developers to use the Transburn DApp for revolutionizing payment systems in games.
- We want gamers to be able to enjoy highly productive and intuitive payment systems for mobile and online games.

Transburn utility token, TRB will be utilize in various ways to incentivize the blockchain node operators to continue to process applications functions and record the encrypted data to blockchain. TRB will be used to interact within a DApp including providing permission to perform certain operations, granting access, rewarding interactions, controlling delivery, storing value and tracking events.

The usability of TRB depends largely on the industries/companies it's been accepted.

## Token Details

Name: Transburn

Ticker: TRB

Decimal: 0

Total supply: 1,000,000

Contract address:

<https://etherscan.io/token/0x6bf0d1afaf3f9073e3706ee4beb140b9bf05a3d4>

# Token Metrics

Community- 40%

Team/Advisors- 15%

Marketing/promotion- 15%

Developers/Exchange listings- 15%

Future reserve- 15%

# **Transburn Road Map**

## **2nd quarter 2019**

Research on Deflationary Tokens

Research on DApps

Formation of the Core Team

Release of Transburn (TRB) Smart contract

## **3rd quarter 2019**

Prelaunch Airdrop

- Formation of TRB Ambassadors
- Launch of TRB bot (version1.0)
- Website Launch
- Platform Launch
- 1st Airdrop
- Listing of TRB on Exchanges
- Development of DApps for games and other utilities

## **4th quarter 2019**

- TransBot (Bot version 2.0)
- Marketing & promotions
- Partnerships
- 50k TRB DApp User challenge (Airdrop)
- Adoption of TRB as Fiat/crypto gateway
- More Exchanges listing

## **1st quarter 2020**

- TRB Cross-chain interoperability
- Marketing
- Future Development

## **Conclusion**

Our goal is to make TRB a transactional currency, consistent and decentralized store of value. Through a system of immutable smart contracts and continuous hyperdeflation.
